Works perfect But the initial setup can be a lil problematic. Someone who isn't using git will get stuck at step #4. Without git installed: 1. Install MPV 2. Install python 3. Install chrome extension 4. Go to <https://github.com/thann/play-with-mpv> and download everthing by pressing "Code" [Green button] -> "Download ZIP" 5. Extract everything 6. Start server by running "play-with-mpv.py" 7. Reload any website for media playback / Restart browser The chrome extension has to be configured as well... Configure the plugin: 1. Open the extension settings 2. Select desired resolution 3. Enter the given server location by "play-with-mpv.py" (for example <http://localhost:7531>) 4. Enter in "MPV Arguments" --force-window (It didn't show a media window without it) Any media will be relayed to the server when pressing the extension button and the mpv media window should appear with it shortly after...
